

# RAFIX FS switching element emergency stop PCB, gold, for SMT LED, 2 NO, with light guide

### fields of application

- > Measurement-control-regulation
- > Electrical engineering
- > Mechanical and system engineering
- > Signalling systems
- > Vehicle construction
- > Agricultural and forestry machinery
- > Construction machinery
- > Handheld terminals
- > Industrial robots

### description

These switching elements have internal plungers and therefore can only be combined with emergency stop and mushroom pushbuttons.

The PCB switching elements are positioned on a PCB shared with other components. These can subsequently be mounted behind the front panel together with the actuators and signal indicators. The switching elements "float" directly underneath the actuators on the PCB behind the front panel and leave plenty of space for other components.

In the center channel of the switching element, there are either light conductors for the use of SMT-LEDs, or 3 mm THT LEDs can be installed for illumination.

### PCB mounting depths

- 9.2 mm for RAFIX 22 FS+ and RAFIX 22 FSR
- 15.7 mm for RAFIX 30 FS+:

The NC contacts of these switching elements are forcibly separated according to IEC 60947-5-1.

- > PCB contact block for RAFIX 22 FS+, RAFIX FSR and RAFIX 30 FS
- > Only suitable for emergency stop and mushroom pushbutton
- > Gold contacts (= grey housing)
- Mounting: Soldering on printed circuit board
- > Version with light guide for SMT LED, without light guide for THT LED
- > marking:
  - normally closed contacts = red plungers
  - normally open contacts = green plungers
  - N/C and N/O contacts = yellow plungers
  - 2 N/C and 1 N/O contacts = red plungers

### FRANÇAIS (FR)

### Mode d'emploi auxiliaires de commande d'ARRÊT D'URGENCE

**Série** RAFIX 16, RAFIX 22 FS<sup>+</sup>, RAFIX 22 FSR, RAFIX 22 QR

### 2. Description générale et utilisation conforme 2. General description and intended use Emergency stop control components are electromechanical switching devices for the protection of personnel. They are used for quick shutdown to bring machines, vehicles and systems into a safe condition to avoid or reduce hazards and damage to people

2. Description genérale et utilisation conforme Les auxiliaires de commande d'arêt d'urgence sont des appareils de commutation électromécaniques de protection des personnes. Ils servent à la mise l'arêt rapide pour mettre les machines, vé-hícules et installations dans un état sûr, afin d'éviter ou réduire dangers et dommages pour les genes et la machine. Les prescriptions suivantes s'appliquent tout particulièrement pour la mise en service, l'utilisation et les vérifications techniques : \*La directive machine 2006/42/CE.

La directive machine 2006/42/CE
Les prescriptions de sécurité et
Les prescriptions de sociatifé et
Les prescriptions de prévention des accidents / règles de sécurité
Le constructeur et l'utilisateur de machines sur lesquelles des auxiliaires de commande d'arrât d'urgence sont mis en œuvre assument la responsabilité du respect de la notice d'utilisation ainsi que des prescriptions et règles de sécurité qui s'appliquent aux. Pour le montage et l'exploitation d'auxiliaires de commande d'aertét d'urgence, les exigences suivantes doivent être respectéeu une évaluation des risques doit être menée pour une utilisation conforme:

- conforme : EN ISO 13849-1
- EN ISO 13850 EN ISO 13849-2

3. Description du produit
Structure: les auxiliaires de commande d'arrêt d'urgence sont une
combinaison d'actionneurs avec un ou plusieurs éléments de commutation. Les auxiliaires de commande d'arrêt d'urgence existent
en version encastrable ou montés dans un boltier. L'actionnement
est réalisé par pression, le dévenouillage selon la variante par :

• Mouvement de rotation vers la droite ou dans les deux sens
(selon la variante)

• Tirage dans le sens contraire de l'actionnement

'ariantes « actiffinactif » :
« Actif » : éclairé, rouge, fonction d'arrêt d'urgence présente
« Inactif » : non éclairé, transparent, aucune fonction d'arrêt d'urgence

Variantes avec serrure :

• Le déverrouillage est réalisé par rotation à droite de la clé après actionnement de l'auxiliaire de commande d'arrêt d'urgence. La clé doit pouvoir être retirée dans n'importe quel état d'actionnement et ne doit se trouver dans l'actionneur que pendait le déverrouillage. Ceci permet d'éviter les blessures aux mains.

### 2. Allgemeine Beschreibung und bestimmungsgemäße

2. Allgemeine Beschreibung und bestimmungsgemäße Verwendung Not-Halt-Befehlsgeräte zur Kortender und der Schaltigeräte zur Macht-Befehlsgeräte sind elektromechanische Schaltigeräte zur Maschinen, Fahrzeuge und Anlagen in einen sicheren Zustand zu bringen, um Gefahren und Schäden für Mensch und Maschine zu vermeiden oder zu verringern. Für die Inbetriebnahme, den Einsatz und technischen Überprüfungen gelten im speziellen folgende Vorschriften:

• Die Maschinenrichtlinie 2008/42/EG

• Die Sicherheitsvorschriften sowie

• Die Unfallverheitungsvorschriften / Sicherheitsregeln Hersteller und Benutzer von Maschinen, an denen Not-Halt-Befehlsgeräte eingesetzt werden, tragen die Verantwortung für die Beachtung der Betriebsanfeitung, wie auch für die Einhaltung der in sie geltenden Sicherheitsvorschriften und regeln. Für den Tichbau und Betrieb von Not-Halt-Befehlsgeräten müssen zur bestimmungsgemäßen Verwendung folgende Anforderungen beachtet und eine Gefahrenbewertung durchgeführt werden:

• EN ISO 13889-1

3. Produktbeschreibung
Aufbau: Die Not-Halt-Befinsgeräte bestehen aus einer Kombination von Betätigern mit einem oder mehreren Schaltelementen. Die Not-Halt-Befehlsgeräte gibt es als Einbauversion oder in einem Gehäuse verbaut. Die Betätigung erfolgt durch Drücken, die Entriegelung erfolgt je nach Variante entweder durch:

• Drehbewegung nach rechts oder beide Richtungen (je nach Variante)

- Ziehen entgegen der Betätigungsrichtung

"Aktiv/lnaktiv"-Varianten:
• "Aktiv": beleuchtet, rot, Not-Halt Funktion gegeben
• "Inaktiv": unbeleuchtet, transparent, keine Not-Halt Funktion

Varianten mit Schloss:

• Die Entriegelung erfolgt per Rechtsdrehung des Schlüssels nach Betätigung des Not-Halt-Befehlsgerätes. Der Schlüssel muss in jedem Betätigungszustand abgezogen werden und sollte sich nur während des Entriegelen im Betätiger befinden. Damit lassen sich Verletzungen der Hände vermeiden.

### 3. Product description

3. Product description
Structure: The emergency stop control components consist of a combination of actuators with one or more switching elements. The emergency stop control components are available as a built-in version or installed in a housing. Actuation takes place by pressing, unlocking takes place depending on the type either by:

 Rotation to the right or both directions (depending on the variant)

Pulling against the actuating direction

Active/Inactive" types:

, "Active": illuminated, red, emergency stop function active
, "Inactive": non-illuminated, transparent, no emergency stop

ypes with a key lock:
Unlocking is performed by turning the key to the right after actuating the emergency stop control component. The key must be removed in every actuation state and should only be in the actuator during unlocking. This helps to avoid injuries to the hands.
